<u>Notes</u>

- 1. Important: Carefully consider the maximum system pressure. The pressure rating of the manifold is dependent on the manifold material, with the port type/size a secondary consideration. Manifolds constructed of aluminum are not rated for pressures higher than 3000 psi (210 bar), regardless of the port type/size specified.

 2. This drawing is for reference only. It is generated by an automated process and does not fall under Sun's document control process.

 3. Body Features: Ninety degree with reverse flow check, accepts standard and weatherized coils.
